DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1 and 5 are rejected under 35 U.S.C. 102(e) as being unpatentable over Yokogawa (US Patent 6,674,131), newly cited.

Yokogawa discloses in figure 1, a semiconductor integrated circuit comprising:

a silicon substrate 10 (see col. 5, line 40);

a silicon epitaxial layer 12a (see col. 5, line 53) that is formed on the surface of said silicon substrate with lower resistivity than that of the substrate;

first and second circuit sections, 30, 40 and 50, respectively, are formed in said silicon layer; and

a device isolation region 11 projecting from said silicon substrate up to a surface of each said first and second circuit sections between said first and second circuit sections.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 2 and 3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yokogawa.

Yokogawa substantially discloses the limitations in the claims, as discussed above, except for expressly disclosing the resistivity of the silicon substrate is between 20/50 and 100 times the resistivity of the silicon epitaxial layer. However, it would have been obvious to one of ordinary skill in the art at the time of the invention to make the necessary adjustments in regard to the resistivity of those layers in order to adjust the breakdown voltage of the diode 20 (see col. 7, lines 65-67 and col. 8, lines 1-6), and its on-state resistance, among other things.

Response to Arguments

5. Applicant's arguments with respect to the previously rejected claims have been considered but are moot in view of the new grounds of rejection.
